

Texas Native Seeds Research Center

As outlined in the 2011 Master Plan, this project is Phase I of the Borderlands Research Institute. It will include a new greenhouse, shade structure, potting shed, outdoor classroom and pedestrian entrance with accessible parking and will be located on East Highway 90 across from the Turner Range Animal Science Center. The project will be an integral part of the educational, research, and outreach mission of the university. Specifically, the Center will provide opportunities for students to play an active role in the propagation and restoration of rangelands on private and public lands in west Texas.

The Vandergriff Group (Midland) has been charged with the design of the facility and are currently working on the schematic design.
